

# Drop2Drink Unit for Food Production

## Application

The Drop2Drink unit was installed at Uytewaal Catering in the municipality Houten as part of the VIDA project. The Drop2Drink unit was put to the test as only water of very high quality was permitted for use during the production of food. We are proud to share that Rainwater was successfully used by Uytewaal Catering to produce food, such as soup and stew, by using the Drop2Drink Unit.

## System

Rainwater storage in three concrete storage tanks of 20m<sup>3</sup>  
DAB source pump  
Drop2Drink unit 20l / min with plastic housing

## Building owner

Private Company

Co-funded by  
the European Union
