

Drop2Drink Unit in an off-grid home

Application

The Drop2Drink unit was installed in an off-grid home as part of an off-grid colony of homes in Frederiksoord, the Netherlands. As a true test of future proof homes, the colony was not allowed to connect to the water or power network in order to prove complete self-sufficiency. The Drop2Drink unit was installed to purify rainwater into potable water for use in the entire house, including: kitchen, bathroom, toilet, washing machine and taps.

System

Rainwater storage tank of 20m³, DAB pump and Drop2Drink unit 30l/min

Building owner

Private family
