

Drop2Drink Unit for production of Jenever (Gin)

Application

The Drop2Drink unit was installed at Hooghoudt Distillery in Dutch province Groningen as part of the VIDA project. The Drop2Drink unit was put to the test as only water of very high quality was permitted for use during the production of Jenever (Gin). We are proud to share that Rainwater was successfully used to produce Jenever (Gin). Hooghoudt Distillery has produced 700 bottles of “Hemelwater Jenever” with purified rainwater filtered by the Drop2Drink unit.

System

Rainwater storage in a concrete tank of 6m³

Drop2Drink Unit 20l/m mounted on the D2D Mobile Test Unit

Building owner

Large Private Company

Co-funded by
the European Union
